Visual Display Products | Glass Markerboards | Custom Display Cases

At Aarco Products Inc., we believe that making your first impression your very best ensures it won't be your last. By choosing our high-quality products, you gain a reliable partner dedicated to meeting your unique needs with innovative solutions. This commitment stems from our extensive experience and expertise, which we have accumulated since our founding in a grassroots facility on July 1, 1975. Proudly celebrating 50 years of manufacturing and distributing visual communication products, our history of exceeding customer expectations serves as proof of our dedication to your success.

Today, Aarco Products has the widest variety of architectural products in our category. We feature the widest selection of frame styles, enabling us to be competitive in many markets. We offer only the best available surfaces, including Polyvision® porcelain-on-steel markerboards and chalkboards, as well as Forbo's "tackable" surfaces. Both of these products are durable and ensure long-lasting quality. In addition, we provide a variety of other high-quality surface materials, including our ClearVision™ low-iron glass for all of your glass markerboards and Marker Wall needs.

Our facilities employ a knowledgeable and skilled staff who have passed the test of time and help to assure consistency and high standards throughout our large product line. Customized products are standard at Aarco Products! Please explore our products online at aarcoproducts.com and aarco.com for more variety. To request a quote or place an order, visit our website and navigate to the product page of interest.

Aarco's Porcelain-on-Steel is manufactured in accordance with industry standards and produced in a continuous coil, ensuring high-quality and consistency. Araeco's Porcelain carries a lifetime limited warranty when used as directed.

Porcelain-on-Steel is a strong, hard, non-porous surface that is virtually indestructible. The porcelain on steel surface is fired at 1364° F. for chalkboards and at 1472° F. for markerboards. Both sides receive a base coat of porcelain enamel. The face side is fired a second time for a controlled finish and color. Standard sizes include heights of 48" or 60" and up to 192" (16') in length.

Bulletin Boards

Cork is a natural Bulletin Board that is resilient and self-healing. Natural Cork is neutral in appearance and blends with many décors. Natural Cork is available in Class B Fire Retardant. Specify when ordering. Natural Cork available in 1/16", 1/8", and 1/4".

VIC Cork is the finest and most durable bulletin board available. A combination of virgin cork composition, linseed oil, and pigment is combined to create this homogeneous product. Heavy jute burlap provides a rigid base for cutting and laminating. VIC Cork is washable, fade-resistant, and indefinitely resilient.

Our fabric is available in many standard and special-order colors to blend with any interior. Our beautiful weave patterns are 100% Polyester, 16 ounces per linear yard, and are fire-rated Class A, ASTM E-84.

Vinyl Bulletin Boards are attractive and durable, and blend with any interior decor. This beautiful product is waterproof, stain-resistant, and washable with mild detergents. Now available in 15 or 20 oz.

Trim Sections

Factory Framed Models

All trim, accessory trays, and map rails are made of satin anodized aluminum in silver or bronze, or powder-coated in a wide variety of standard and custom colors.

The minimum thickness of .062 adds both strength and durability to the aluminum. Our standard visual display boards are available in sizes up to and including 60" x 192" in one piece. Custom sizes and multiple-section boards are also available. Accessory trays are equipped with end caps. One "L" bracket is supplied for every 2' of board.

Aluminum Finishes

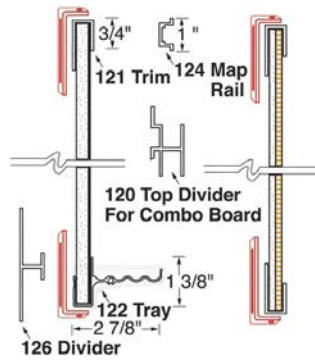

Field Assembled Models

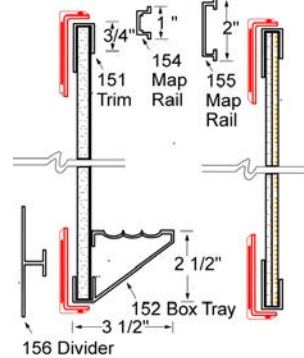

All trim, accessory trays, and map rails are satin anodized aluminum in silver or bronze or powder-coated in a wide variety of colors. On series 10-520, 10-620, and 10-720, the trim and map rails are factory attached. Accessory trays and concealed mounting hangers are shipped separately and mounted to the wall first. Boards are placed over the top hangers and inserted into the accessory tray. On series 10-820, "Snap-on" Trim, all trim and boards are shipped unassembled. Fabricating is done on-site.

The maximum continuous length of the accessory trays is 24' (subject to limited inventory) and 16' for writing surfaces. Wider surfaces are available as multiple units. The minimum thickness of any aluminum section is .062". One "L" bracket is supplied for every 2' of board (top of board only), except for units with field-mounted accessory trays, which mount directly to the wall.

Vertical Sliding Units

This **“TOP OF THE LINE”** Visual Communication Product offers unlimited workspace in normal-sized rooms. Aarco's high-quality vertical sliding units are uniquely designed to stack one in front of another. Our unique removable face frame allows the addition of a second or third sliding track, and its industry-leading design allows for boards to be stacked one in front of another. The smooth sliding panels move easily up and down on ball-bearing rollers and are counterbalanced with precise weights. See Figure 1. Vertical motion is effortless and all units are constructed of heavy-duty aluminum for superior strength and durability. Vertical sliding units can be equipped with a fixed rear panel of your choice or can be left open for access to storage space behind. See Figure 2 for housing dimensions and extrusion profiles. All units are shipped KD and are easy to assemble.

HIDE A PANEL DESIGN

Sliding panels disappear behind the vinyl kick panel providing multi-media capability

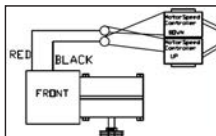

Standard Units Include:

- Satin clear anodized aluminum frame and track
- Porcelain on steel markerboard or chalkboard fixed and sliding panels
- Full length accessory tray
- Mounting hardware and instructions
- Honeycomb core for reduced weight of sliding panels

Horizontal Sliding Units

The Horizontal Sliding Unit combines writing surfaces, **including glass**, tackable surfaces, and even projection surfaces into one unit. Sliding panels hang from nylon carrier rollers, top-mounted to a monorail-type track (See Figure 2). The bottom trim is equipped with a bearing guide that glides effortlessly on a full-length track (See Figure 3). The result is smooth movement of the panels, allowing all panels to be viewed at different times, doubling, tripling, or quadrupling the working area.

Use your imagination and select any combination of writing boards and display boards shown on pages 3, 4, or 5 for fixed and sliding panels. Sizes range from 4' to 5' in height and up to 24' in length. Equipped with 2" x 2" aluminum angles for sturdy wall mounting.

Standard Units Include:

- Satin clear anodized aluminum frame and track
- Porcelain fixed and sliding panels
- Full-length accessory tray
- Mounting hardware and instructions
- Honeycomb core for reduced weight
- Effortless left/right movement

**ALSO AVAILABLE WITH
WITH GLASS SLIDING PANELS**

Frameless Teaching Walls

2 Track Unit 4" Deep	10-170C
3 Track Unit 6" Deep	10-171C
4 Track Unit 6" Deep	10-172C

These units provide the same features as our horizontal sliding units, but are supplied without its full perimeter housing. This makes them ideal to install inside a custom properly supported wall opening or, in pre-fabricated custom cabinets or case work. Durable rubber stops are provided to prevent sliding panels from coming into contact with the existing surface.

Portable Modular Boards

Aarco Portable Modular Boards can be moved from room to room or wall to wall easily. A screwdriver is all that is needed to unlock these boards. Additionally, boards can be raised or lowered in height to accommodate the user's comfort, even from a seated position. At the same time, boards are safely locked into position when in use. (See Figure 1).

Accessory trays are full-length units and include protective molded end caps. Modular units install easily on precisely spaced standards (See Figure 3). Single standards are used for the left and right ends. Double standards are used between individual boards. Sizes are 48" x 48" and 48" x 96". Choose from a wide variety of board surfaces on pages 4-5.

All units are fabricated with series 10-2500 trim and 10-2501 accessory tray. Trim is specifically designed for heavy duty use. Modular clips are permanently attached (See Figure 2).

Display Cases

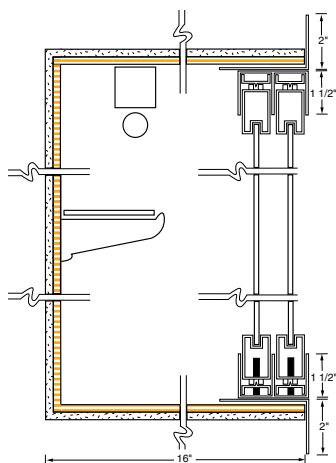

10-2000 Deluxe Recessed Display Case

Our 10-2000 Display Case is Aarco's most popular and flexible design. Sliding doors provide maximum accessibility, especially in tight corridor conditions. Our large aluminum frame construction provides reinforcement for door sizes exceeding 48", and roll smoothly on large metal sheaves. Sturdy $\frac{3}{4}$ " D3 Birch/Maple Plywood is custom-fitted to any rough opening. Choose from a wide variety of interior surfaces and metal finishes. Sizes range from 36"H x 48"W to huge 96"H x 144"W with 3 sections of sliding doors. See photo below of multiple units adjoined to fill a huge 24' opening.

Features Include:

- $\frac{3}{4}$ " D3 Birch/Maple Plywood
- Heavy gauge extruded sliding track & door frames
- Brass shelves rollers for smooth door movement
- Standard depth 16", maximum 24"
- $\frac{1}{4}$ " tempered glass doors & shelves ($\frac{3}{8}$ " shelves optional)
- Push-button locks keep valuables secure
- UL listed single bulb fluorescent fixtures or LED strip lighting
- Transformer storage door provides hidden access
- Pre-attached pilaster strips & adjustable shelf brackets
- Custom sizes to your specifications
- Also available with frameless $\frac{1}{4}$ " glass doors up to 48" height.

Elegant High-Line Display Cases

Flexible Pivot Hinged Display Case

This display case is our most flexible unit and offers large format construction in height, depth, and length. Since it incorporates heavy-duty pivot hardware, we can fabricate glass doors up to 10' heights and 48" widths. The outer perimeter is constructed from heavy-gauge aluminum tubing, which is the basis of the strength for the large doors.

The Flexible Pivot Hinged Display Cases can be manufactured as full recess, semi-recess, or surface-mounted. The vertical edges of the glass are unframed, making the visible area as maximum as possible. They can be installed side by side to for an extensive full wall display. Its jaw-dropping and extraordinary design will do justice to the precious exhibit items they will contain and protect, as the pivot-hinged doors are lockable and can be coordinated with other security locks inside the location where they will be installed.

We offer units with satin anodized and powder-coated finish in a wide selection of colors. LED Illumination is standard and is quoted according. Glass doors and shelves are tempered glass.

Aluminum Finishes

The Eclipse Display Case

The Eclipse Display Case is an attractive way to display your valuable belongings or products such as art, awards, memorabilia, photographs, and more. Eclipse is a semi-recessed cabinet that is designed with luxury at the forefront for elegant environments. The side verticals of the Eclipse have a narrow glass panel that allows the LED illumination to leak out into the common area, giving an illusion of an eclipse.

Eclipse is a customized unit that allows unlimited dimensioning both behind and in front of the wall. This design makes it possible to adhere to strict ADA compliance, restricting protrusion from the wall to less than 4". Eclipse also incorporates heavy-duty pivot hardware, assuring security of your valuables and ease of use. Doors can be keyed like most doors, giving easy access for maintenance professionals. The heavy-duty design of Eclipse allows for sizes up to 12'W and 96"H. Choose from a wide variety of backgrounds and metal finishes. Adjustable shelves are limited only by the depth of the unit.
